Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Proc. Natl. Acad. Sci. U.S.A. 89:11574-11578(1992).

-!- FUNCTION: HOF IS A POTENT MITOGEN FOR ADTURE PARENCHYMAL—
HEPATOCYTE CELLS, SEEMS TO BE AN HEPATOTROPHIC FACTOR, AND ACTS A GROWTH FACTOR FOR A BROAD SPECTRUM OF TISSUES AND CELL TYPES. IT HAS NO DETECTABLE PROTEASE ACTIVITY.

-!- SIMILARRIY: HIGH, TO OTHER HGF; LOWER, TO PLASMINOGEN.

RA MELJERS J.C., DAVIE E.W., CHUNG D.W.;

RA "Expression of human blood coagulation factor XI: characterization of the defect in factor XI type III deficiency.";

RI Blood 79:1435-1440(1992).

CC -!- FUNCTION: FACTOR XI TRIGGERS THE MIDDLE PHASE OF THE INTRINSIC CO. PATHMAY OF BLOOD COAGULATION BY ACTIVATING FACTOR IX.

CC -PATHMAY OF BLOOD COAGULATION BY ACTIVATING FACTOR IX.

CC -!- CATALYTIC ACTIVITY: SELECTIVE CLEAVAGE OF ARG-|-ALA AND ARG-|-VAL CC BONDS IN FACTOR IX TO FORM FACTOR IXA.

CC -!- SUBUNIT: HOMODIMER; LINKED BY A DISULFIDE BOND. AFTER ACTIVATION CC THE HEAVY AND LIGHT CHAINS ARE ALSO LINKED BY A DISULFIDE BOND.

CC -!- PIM: ACTIVATED BY FACTOR XIIA (OR XII), WHICH CLEAVES EACH POLYPEPTIDE AFTER ARG-387 INTO THE LIGHT CHAIN, WHICH CONTAINS THE ACTIVE SITE, AND THE HEAVY CHAIN, WHICH ASSOCIATES WITH HIGH MOLECULAR WEIGHT (HAW) KININGEEN.

-!- DISEASE: DEFECTS IN F11 ARE A CAUSE OF A BLOOD COAGULATION ABNORMALITY (ROSENTHAL SYNDROME) OCCURRING IN HIGH FREQUENCY IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PARTIAL SEQUENCE, AND DISULTAND PARTIAL SEQUENCE, AND DISULTAND MEDLINE; 91152017, MCMULLEN B.A., FUJIKAWA K., DAVIE E.W.; "Location of the disulfide bonds in human coagulation factor XI: presence of tandem apple domains."; Biochemistry 30:2056-2060(1991).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      presence of four novel apple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SYSTEM BY CONVERTING PROPENIN INTO RENIN.

SUBUNIT: THE ZYMOGEN IS ACTIVATED BY FACTOR XIIA, WHICH CLEAVES
THE MOLECULE INTO A LIGHT CHAIN, WHICH CONTAINS THE ACTIVE SITE,
AND A HEAVY CHAIN, WHICH ASSOCIATES WITH HMW KININGEN. THESE
CHAINS ARE LINKED BY ONE OR MORE DISULFIDE BONDS.

DISEASE DEFECTS IN KLAS ARE THE CAUSE OF FLETCHER FACTOR
DEFICIENCY, A BLOOD COAGULATION DEFECT.

SIMILARITY: CONTAINS 4 APPLE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: THE ENZYME CLEAVES LYS-ARG AND ARG-SER BONDS. IT ACTIVATES, IN A RECIPROCAL REACTION, FACTOR XII AFTER ITS BINDING TO A NEGATIVELY CHARGED SURFACE. IT ALSO RELEASES BRADYKININ FROM HAW KININOGEN AND MAY ALSO PLAY A ROLE IN THE RENIN-ANGIOTENSIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS T TRYPSIN FAMILY. BELONGS TO THE PLASMA KALLIKREIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              molecule.
Bradykinin
